B.Tech in Information Technology

PROJECTS

- SPORT CONNECT**

Developed a web-based platform aimed at connecting athletes, coaches, and sports enthusiasts through an intelligent chat system. The application enables users to create profiles, join interest-based sports groups, and engage in real-time discussions. Integrated features include smart chat functionalities, user authentication, and community-based interaction. The platform fosters collaboration, mentorship, and information sharing within the sports ecosystem.

- EXAMINATION RESULT ANALYSIS SYSTEM(USING JAVA,SWING,JFREECHART**

Created a desktop-based application to automate the result analysis process for academic institutions. The system allows faculty to input student marks, calculate performance metrics, and generate insightful visual reports such as bar graphs and pie charts. It simplifies result management, enables quick evaluation, and improves academic decision-making.

- RECIPE MANAGEMENT SYSTEM**

Built a recipe management database in MySQL implementing multiple core database concepts such as Range, Hash, and List Partitioning, Schema Design, Normalization, and DML/DDL operations. Demonstrated parallel database execution, query optimization, and data distribution strategies across partitions. Designed schema diagrams to visualize relationships and showcased practical applications of scalability, indexing, and partition-aware queries in real-world systems.
